1. This office action, in response to the amendment filed 10/27/2004, is a final office action.

Response to Arguments

2. Applicant's arguments on pages 23-25 of the amendment, filed 10/27/2004, with respect to claims 1-11 and 21-56 have been fully considered and are persuasive. The rejections of these claims have been withdrawn. These claims are allowed.

New claims 58-64 are rejected as stated below.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 58-64 are rejected under 35 U.S.C. 102(b) as being anticipated by Chevillat et al (US 5,031,195).

Regarding claims 58, 61 and 64, Chevillat discloses a method and apparatus for correlated noise reduction as shown in figure 7. A Viterbi (trellis) decoder (column 5, lines 63-65) receives a sample of an analog data signal. The trellis decoder makes a first symbol decision and this signal, a_n , is input to the ISI coefficient estimator 44. This signal is a tentative decision (column 10, lines 54-56). a_n is also used to create an error

signal e_n . The trellis decoder makes a second decision for the sample and this signal a_n is output from the system. The tentative decision is made prior second decision. The ISI coefficient estimator (noise predictor) has its coefficients updated based on the error signal (column 9, lines 31-48).

Regarding claims 59 and 62, the error signal is indicative of the difference between a tentative decision and a delayed version of the sample as shown in figure 7. The delay is caused by the path prior to the input of the adder that has the output of ISI coefficient estimator 44 as an input.

Regarding claims 60 and 63, the tentative decision is an "estimate" of the symbol and the output of the system is the "decoded" symbol.

Allowable Subject Matter

4. Claims 1-57 are allowed.

Conclusion

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not

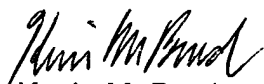

Art Unit: 2631

mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
